

Week 2 Project

You have been tasked to use Terraform to spin up a nodes. The node should run Tomcat and Jenkins.

Infrastructure setup should be completely via Terraform. You may leverage existing Security Group, key-pair, and subnet.

Log on to the box and verify your installations. You should only log on to verify, not to manually install the packages.

Bonus point: See if you can access installed Jenkins via your browser after completing the exercise.

You can leverage this:

<https://www.terraform.io/docs/provisioners/remote-exec.html>

Please use Google generously and the forum.
